

Azure Done Right™

Containers Accelerator

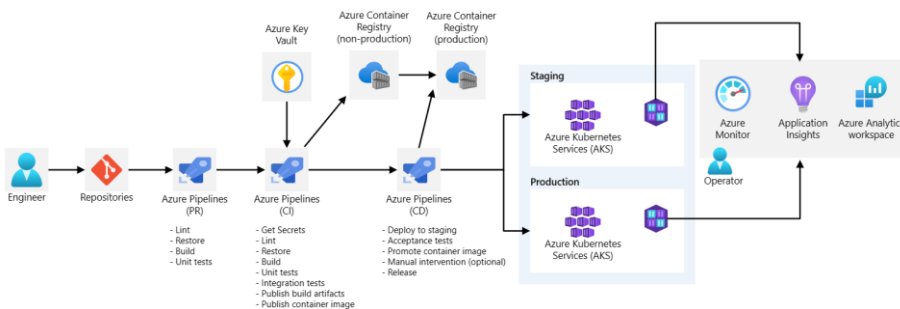

FUTURE-READY YOUR APPLICATIONS BY ENHANCING SCALABILITY, STABILITY AND SECURITY, ALLOWING FOR DECREASED TIME TO MARKET

Do you require updated scalable infrastructure to meet increasing customer demand? Our Containers Accelerator is designed to provide you with the foundation for accelerated modernisation.

Laying the groundwork, Arinco's expert senior consultants target one key application for containerising, developing the target landing zones and allowing your team to use repeatable pattern and processes for future applications.

Containerisation not only improves application scalability, but you will also benefit from decreased time to market for feature releases, due to streamlined deployment processes which enable agile development. Benefit from an enhanced software development culture and increased developer skills within your organisation. Start your modernisation journey with confidence!

Why customers use Arinco's Container Accelerator

This 6-week engagement is relevant for you if you:

- Build container foundations the right way paving the way for application modernisation.
- Want a clear app modernisation roadmap and pathway to a containerised environment, making way for future scalability and growth
- Want to future-proof your infrastructure, allowing for seamless adaptation to evolving market expectations
- Keep up with business and customer demand, by enabling increased application workload capacity
- Wish to improve software development culture internally, allowing for faster software releases and agile development.

ASSESS

Assess your current state environment and align on target application to containerise for pilot development.

DESIGN & ROADMAP

Design and development of target landing zone for container infrastructure, including testing and feedback for revised deployment if required.

HANDOVER

Comprehensive handover of assessment and design, aligning your team on actionable next steps to migrate future applications leveraging the same pattern.

Key Deliverables: IaC templates, decision tree on options and Application deployment pattern
