

TRANSFORM YOUR ABILITY TO DETECT AND RESPOND TO SECURITY INCIDENTS WITH ARINCO'S SENTINEL ACCELERATOR

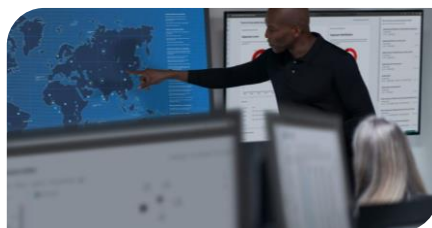

Arinco's Sentinel Accelerator is a pre-packaged offering which strengthens your organisation's ability to detect and respond to cyber threats and incidents across your IT environment.

The core objectives are to identify your business-critical assets and to design and deploy a foundation Microsoft Sentinel platform.

We include workspace design, data connector set up and data collection best practices, cost optimisation, threat intelligence and the configuration of out-of-the-box threat detection capabilities as part of this accelerator.

Blue Zebra Insurance embraces automation, security and innovation

Why customers use the Microsoft Sentinel accelerator

Centralise security event collection, alerting and incident management

Reduce manual tasks with automated responses that can resolve threats efficiently

Optimise cost with a flexible, scalable platform that can adapt to the organization's size and needs.

Build on the threat detection capabilities of native products

Reduce time to ingest and configure analytic rules with out-of-the-box integrations

ASSESS

- Identify critical assets
- Prioritise logs and data connectors
- Identify roles responsibilities
- Review incident response processes
- Review migration steps

Assessment Report and Recommendations

DESIGN & DEPLOY

- Deployment and configuration of Microsoft Sentinel
- Integration with Microsoft 365 and Azure services and on-premises data sources
- Implementation of default detection rules provided by Microsoft Sentinel for identifying common threats

Microsoft Sentinel Configuration

OPERATE

- List of processes for ongoing management
- Deploy mechanisms to automate the update of solution content
- Learn how to investigate incidents and hunt for threats
- Implement basic automated response playbooks
