

SIMPLIFY YOUR DIGITAL ECOSYSTEMS WITH A SEAMLESS, SCALABLE AND SECURE INTEGRATION PLATFORM.

Integration lies at the heart of modern enterprise architecture. It can be a challenge to ensure seamless data flow and process orchestration across disparate systems, while adhering to security and compliance standards.

Our Integration Platform Accelerator addresses this very problem, by turning point-to-point connections into a streamlined, secure and scalable platform built on Azure Integration Services. Our code-first methodology enables reusable frameworks and templates to avoid the need for tangled webs of code.

We bring our existing expertise in the form of repeatable practices, processes and frameworks, ensuring best-practice design and deployment. This enables faster deployments and enhanced developer productivity.

Why customers use Arinco's Application Assessment:

This 10-12 week engagement is relevant if you want to:

- Implement or consolidate an integration strategy
- Develop a scalable integration platform solution to meet business needs
- Accelerate API Programme within your organisation
- Leverage repeatable frameworks
- Enhance developer productivity and reduce time to market
- Securely share data and integrate with third-parties

DESIGN

Understand key business drivers and establish standardised integration architecture to select the appropriate technologies.

DEVELOP & INTEGRATE

Design and deploy an integration platform, implementing the initial integration while ensuring security and scalability.

MONITOR & SCALE

Monitor performance and availability, deploy further integrations, configure additional regions and ensure business continuity.

Key Deliverables: API\Integration Platform, Integration architecture and repeatable processes.
